

Product Name : BJT Amplifiers and Emitter Follower Trainer	Product Code : NLAB-ELECTRONICSAB420006
Description : BJT Amplifiers and Emitter Follower Trainer	
Technical Specification : BJT Amplifiers and Emitter follower Trainer is a unique product designed to explain the role of BJT's as singlestage/ multistage RC-coupled amplifiers and as common collector emitter followers. One of the common method for coupling two stages of an amplifier is RC-coupling. RC-coupled amplifiers have the advantage of wide frequency response and relatively small cost and size. Darlington transistors are circuits that combine two bipolar transistors in a single device such that high current gain (β) is obtained and lesser space is required than that used by two discrete transistors. Is useful for students in plotting the frequency vs. Gain response of BJTs and in the measurement of parameters such as Bandwidth, Input Impedance etc. Scope of Learning Study of the working principle of Differential Amplifier Study of the working principle of class B push-pull Amplifier Technical Specifications DC power supply : +12 V, +5 V Fuse : 500 mA, slow blow Sine wave generator Frequency : 10 Hz - 100 KHz $\pm 10\%$	

Amplitude : 0 to 5 Vpp

Mains supply : 230 V $\pm 10\%$, 50

Features

Easy illustration of multistage amplifier and emitter follower

In-built sine wave generator with variable frequency and amplitude

In- built DC power supply
