

Product Name : Naugra Homogenisation Sub Systems	Product Code : NLAB-TECHNICALAB23006
Description : Naugra Homogenisation Sub Systems	
Technical Specification : Features of Homogenisation Sub Systems • Complete Homogenisation Subsystems • Configurable for upstream or downstream homogenisation • Variable throughput • Two Stage Homogenisation with adjustable pressure (1000bar) • Twin Pistons or Single Piston • Pulsation Dampers included • Comprehensive instrumentation includes product temperature, product line pressure, homogenisation pressure and pump speed. • All these parameters are displayed on the control console and available for datalogging via the integral USB data logger. • Datalogging software seamlessly integrates the data with the data from the similar. • Adjustable divert facility for easy integration into continuous flow processes. • Complete with interconnection hoses • Can be sterilised and used in an Aseptic system Benefit	

1. In-line homogenisation for trial quantities and miniature-scale processingSimple integration with existing plant
2. Simple integration with existing plantUses scale-down valve technology which ensures the results are representative of production scale processing.
3. Uses scale-down valve technology which ensures the results are representative of production scale processing.

Unit Specifications

Unit
Model: NAB-600
Capacity: 600 L/hr
Output: Adjustable
Homogenisation
Pressures
Homogenisation Temperature
Sterilisation Temperature (30 mins)
Power
Pistons
