

Product Name :
Training System Speed Control HSI

Product Code :
AR111

Description :

Training System Speed Control HSI

Technical Specification :

Training System: Speed Control, HIS

This compact experimental unit offers every opportunity to learn the fundamentals of control engineering through experimentation on a speed control system. The experimental setup is mounted on a housing which accommodates all the electronics. A transparent protective cover permits safe observation of the experiments. A DC motor drives a shaft with a mass flywheel. The dial gauge allows the speed to be read off directly at any time. The speed is measured inductively using a speed sensor. The output signal from the sensor is sent to the software controller. The output signal from the controller influences the motor current. A generator acting as a mechanical resistance to shaft rotation can be activated by the software to study the influence of disturbance variables.

Experimental unit for control engineering experiments

Speed control of a DC motor with shaft and flywheel

Transparent protective cover for motor/generator set

Inductive speed sensor

Generation of disturbance variables by adjustable generator load

Software-based controlled system simulation

Process schematic on front panel

Networkable software

Software with control functions and data acquisition via USB under Windows 7, 8.1, 10 including PC1 Computer-System with 21" TFT-Monitor Win 10 engl.

Technical Data:

Motor

Speed: 4500min⁻¹

Motor power output: 10w

Torque: 1,7ncm

Generator

Speed: 4500min⁻¹

Power output: 10w

Torque: 1,7ncm

Tachometer (analogue): 0...6000min⁻¹

Software controller configurable as P, PI and PID controller

Software

Process schematic with controller type selection (manual, continuous controller, programmer)

Time functions

Simulation function

Disturbance variable input

230V, 50Hz, 1 phase
